

# USING SYMBOLS AND EXPRESSIONS TO THINK MATHEMATICALLY— SET 7

**A** *Students can factorise, expand and simplify algebraic expressions.*

Students may solve these equations slightly differently or in a more simplified way skipping some steps below.

Example 1: Expand

$$\begin{aligned} 6(x + 4) \\ = 6 \times x + 6 \times 4 \\ = 6x + 24 \end{aligned}$$

Example 2: Factorise

$$\begin{aligned} 6x + 24 \\ = 6 \times x + 6 \times 4 \\ = 6(x + 4) \end{aligned}$$

Example 3: Simplify

$$\frac{(x - 3)(x + 4)}{(x - 3)(x - 4)} = \frac{x + 4}{x - 4}$$

Example 4: Expand Quadratic

$$\begin{aligned} (x - 3)(x + 4) \\ = x \times x + x \times 4 - 3 \times x - 3 \times 4 \\ = x^2 + 4x - 3x - 12 \\ = x^2 + x - 12 \end{aligned}$$

Example 5: Factorise

$$\begin{aligned} x^2 + x - 12 \\ \text{Need numbers that} \\ \text{multiply to -12 and add to +1} \\ \text{i.e. -3 and +4} \\ = (x - 3)(x + 4) \end{aligned}$$

Example 6: Solve

$$\begin{aligned} (x - 3)(x + 4) &= 0 \\ \text{Each part can be } &= 0, \text{ as 0} \\ \text{times anything is } &0 \\ x - 3 = 0 &\quad \text{OR} \quad x + 4 = 0 \\ x = 3 &\quad \text{OR} \quad x = -4 \end{aligned}$$

**B** *Can solve simultaneous equations.*

Students may solve these equations slightly differently or in a more simplified way skipping some steps below.

Substitution

$$\begin{aligned} 3x + y &= 10 \\ 2x + y &= 8 \\ \text{Rearrange bottom equation} \\ y &= 8 - 2x \\ \text{Put into second equation} \\ 3x + (8 - 2x) &= 10 \\ 3x + 8 - 2x &= 10 \\ x + 8 &= 10 \\ x &= 2 \end{aligned}$$

Elimination

$$\begin{aligned} 3x + y &= 10 \\ 2x + y &= 8 \\ \text{Subtract the bottom equation} \\ \text{from the top equation} \\ \bullet \quad 3x - 2x &= x \\ \bullet \quad y - y &= 0 \\ \bullet \quad 10 - 8 &= 2 \\ x + 0 &= 2 \\ x &= 2 \end{aligned}$$

**C** *Can model real world situations and to solve problems, including quadratic equations, using correct algebraic notation.*

Natasha has a small square painting with a frame of constant width around it. The painting (without the frame) has an area of 49 cm<sup>2</sup>. The area of the framing is 32cm<sup>2</sup>.

Form an equation and solve it to find the dimensions of the frame.

**Form an Equation**

$$\text{Area} = x^2 = 49 + 32$$

**Solve**

$$x^2 = 81$$

$$x = 9 \text{ or } -9$$

Frame cannot be negative width, so must be 9cm wide, and 9cm tall as the frame is square.

*Extension:*

As the painting is 49cm<sup>2</sup> and a square, it must be 7cm x 7cm, so the frame must be 1cm thick on each side.
