

Goldilocks

Annotation

Micky can identify a correct statement made by a classmate about a data display but he is unable to explain his thinking.

Problem: Goldilocks

The students draw their favourite character from *Goldilocks and the Three Bears* on squares of paper. Together with the teacher, they group the characters and make a pictograph by putting the squares into columns.

The teacher asks the students: "What can we say about this pictograph? What does it say about our favourite characters from *Goldilocks and the Three Bears*?" Mark says, "Goldilocks gets most of the people." Then the teacher asks the students:

Mark says Goldilocks gets the largest number of votes. Do you agree with Mark?

Student Response

Micky: Nods his head.

Teacher: Tell me more about that.

Micky: Points to the Goldilocks column but says nothing.
