

# Sporting ways

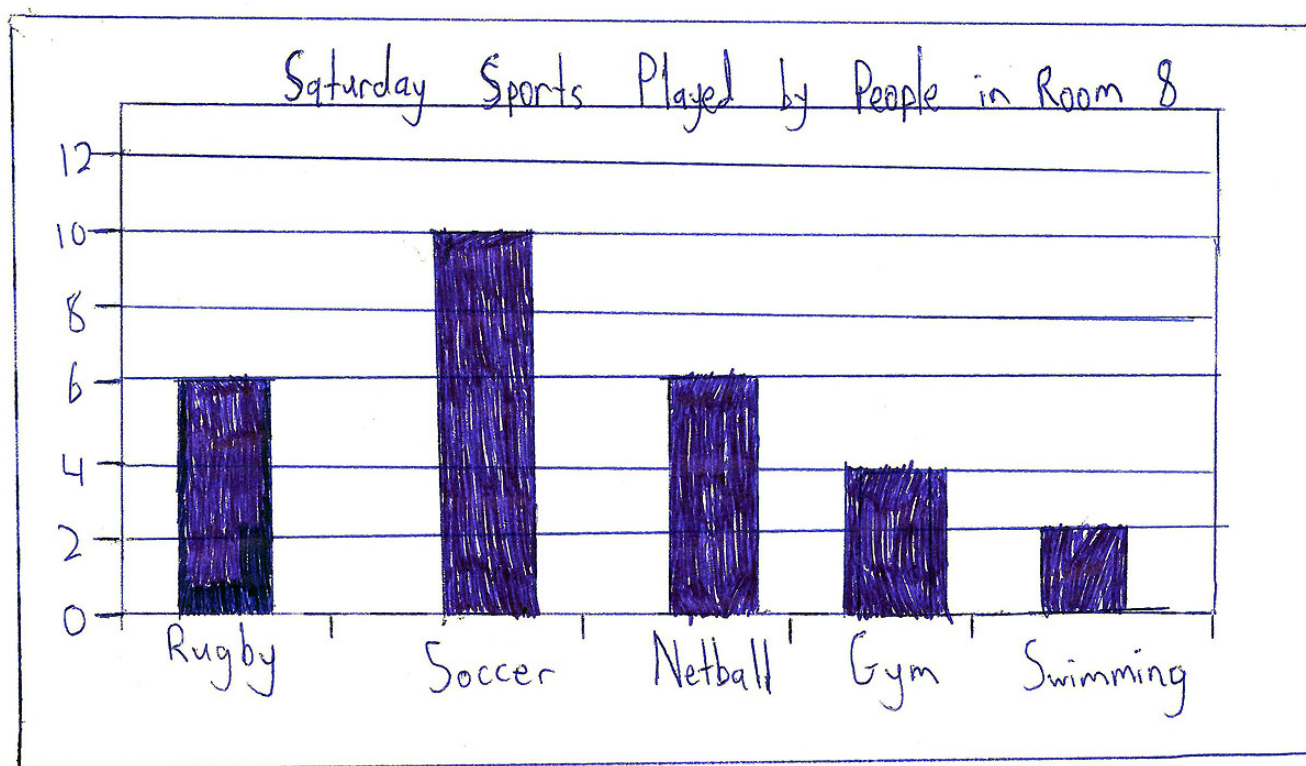

---

## Annotation

Jordyn can identify an error in a classmate's statement about a data display. She can explain her thinking by referring to the data on the graph, including the total number it represents.

## Problem: Sporting ways

A student makes a bar graph of the sports that the 28 people in his class do on Saturday mornings.

The class discuss the student's graph. Max says: "Most of the people in our class play soccer." The teacher asks the students:

*Do you agree with Max?*

## Student Response

Jordyn: I don't think Max is right saying soccer is the most.

Teacher: Tell me more about that.

Jordyn: Well, soccer is the favourite coz it's got the biggest bar but it's not most of the people. If you put the other sports together they'd make more than soccer.
