

Find and Place Game

Annotation

Matiu is able to follow directions and navigate his surroundings to locate familiar items. He can follow instructions that include everyday positional language.

Problem: Find and Place Game

The teacher poses this problem as part of a finding and placing game:

Can you find something to drink from, and then put it on your desk? Can you find three counters and place them under the teacher's chair?

Student response

Matiu walks over to the table that the drink bottles are on and picks up his drink bottle. He walks to his desk and puts his drink bottle on his desk and returns to the mat.

Next Matiu goes to the maths corner, counts out three counters from the container and walks over the teacher's desk. He asks, "Where do I put them?" The teacher reminds him, "Under my chair." He puts the counters under the teacher's chair.
