

The Same and Different Game

Annotation

Lilia can find, sort by appearance and name common shapes.

Problem: The Same and Different Game

The teacher provides the student with shape cards and poses this problem:

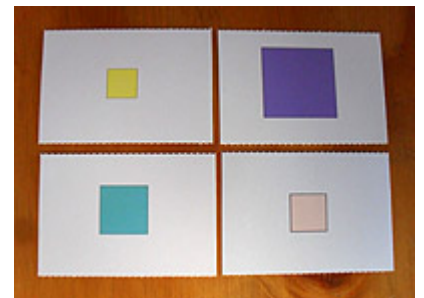

Can you sort these cards into groups that have the same shape on them?

Student response

Lilia sorts squares, rectangles, and triangles according to conventional images.

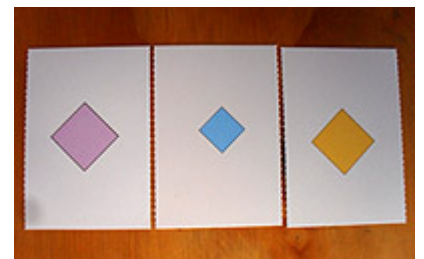

Teacher: Tell me how you sorted the shapes

Lilia: I got all the squares first. That purple one's quite a big one isn't it?

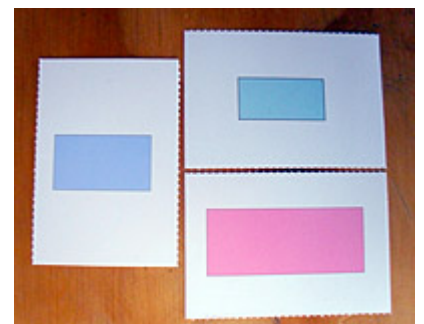

Teacher: What about these ones?

Lilia: Those ones are diamonds, see.

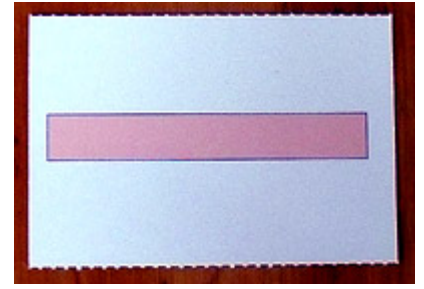

Lilia: Next I got all the long squares. I think these ones are called rectangles but sometimes it's oblongs.

Teacher: What about this one?

Lilia: I think it belongs with those ones (pointing to the rectangles) but I'm not sure. Maybe it has another name coz it's much longer

Lilia: Then I got the triangles. These are all triangles.
