

# End-of-year trip

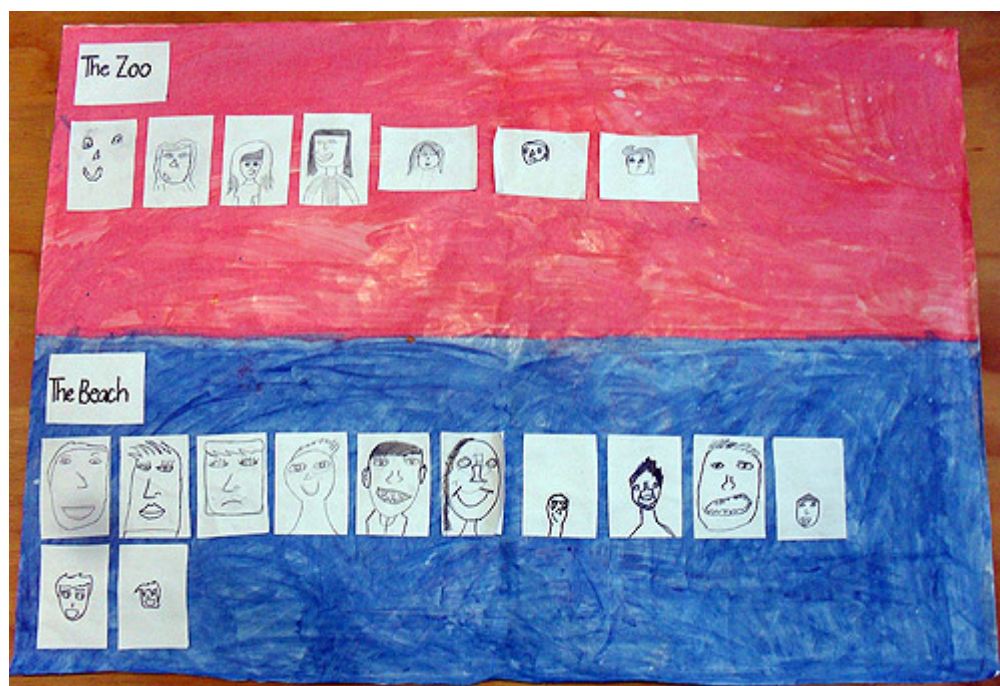

---

## Annotation

Wei Lang can identify a correct statement made by a classmate about a data display. He uses the data display to support his explanation.

## Problem: End-of-year trip

The class are going for an end-of-year trip. Each student votes for their preferred destination: the zoo or the beach by drawing their face on a blank sticky note square and adding their square to the data display with support from the teacher.

The class discuss the resulting pictograph. Myra says, “We are going to the beach! Yay! I voted for the beach!” The teacher asks the students:

*Do you agree with Myra? Are we going to the beach for our trip?*

## Student Response

Wei Lang: Yes! Myra’s right!

Teacher: Tell me why you think that.

Wei Lang: Because I voted for the beach, and so did more people.

Teacher: Can you tell me some more about your thinking?

Wei Lang: (pointing to the pictograph) There are more faces here, for the beach. Up there for the zoo is not so many faces.
