# Favourite soft toys

Annotation

Abi can identify a correct statement about a data display. He is able to recognise his own data within that display and he can describe his actions.

Problem: Favourite soft toys

The teacher works with the students to make a data display of the classes' favourite soft toys. Each student puts their toy in the appropriate column. The class then discusses the data display.

The teacher writes a statement about the data display on the whiteboard.

This data display shows the favourite soft toys of people in our class.

The teacher reads the statement and asks the students:

Is this true? Does this data display show the favourite soft toys of the people in our class?

Student Response

Abi:	That's true!
Teacher:	Tell me why you think that.
Abi:	I put my best toy in that line there (points to the bear column), and there are all our soft toys (indicating the collection).
